

Delete Old/Expired Certificate Process

When a certificate has expired you may uninstall it. Be sure you are removing the expired one:

1. In Microsoft explorer Click the "Tools" option on the top bar. From the drop down list, click "Internet Options."
2. The following dialogue box should appear. Click on the Content tab along the top and then the certificates button located near the middle of the box.

3. Select the expired certificate under Personal (A.) Please note the expiration date (B). Then click on (C.) to remove the expired certificate.
